Question-4:

Describe the best project you have worked on, including links if any.

One of the best projects that I have worked on is "**eAuction**" which is a dynamic web application built using *Django*, *SQLite*, HTML, CSS, and JavaScript. This application allows users to create and manage auction listings. Users also can bid available listings and purchase the products. Further users can comment on listings and add multiple auction listings to their watchlist.

Designed and developed user interface, data models and server-side functions. This project is part of "Harvard CS50's Web programming with Python and JavaScript" online course.

Question-5:

If you start a software company name 2 people from your batch whom you will choose as your partner and why

If I were to start a software company, my go to guys would be *Sai Prasath* and *Balasubramanian*. Having worked with both of them on multiple instances, I feel they would be my right partners. Balasubramanian is technically very sound and composed while Sai Prasath is analytically strong and accounts for all if's & buts. Both would go the extra-mile to accomplish the task and complement each other.
